## Justification:

Generally, there are changes in component costs due to the following:

- Additional type of work/project (embankment/gravelling) component;
- Based on the revised length as per actual survey/as per design for the different types of work; and
- Based on the unit costs generated as per programmed.

Additional type of work/project component (embankment/gravelling) with considerable unit cost were due to the following:

- The original scope of work of the project involves concreting of two road sections. However, as per actual survey, portion of section 1, which is the priority section as identified by DTI (see attached MOA between DTI and DPWH and Certifications of Consultations), will form part of a proposed dike (based on Tagum-Libuganon Master Plan) since said section is located on a lowlying area and at the downstream side of a major river basin, particularly the Tagum-Libuganon. With this, there is a need to raise first the roadway elevation (embankment works/gravelling) of the road section inorder to address flooding problem in the area. This is also to ensure that said embankment is sufficient to cater the highest flood level.
- Since the area is subjected to inundation, there is a need to raise the grade line to at least 0.5 meter above the maximum experienced flood level. The additional unit cost for embankment works/gravelling was then due to the average embankment/fill height of 2.4 m to 3.02 m and gravel road width of 11.75 m as per design and considering that the embankment materials are from borrow and not from roadway excavation.

Decrease in physical target for concreting from 7.200 lane km to 2.696 lane km but with lower unit cost due to the following:

- Change in type of work for section 1 (from concreting to gravelling);
- Based on the remaining allocation since section 1 is being prioritized; Remaining allocation only covers 1.348 km for section 2; and
   Unit cost for concreting is less than that of the original since there is a minimal horizontal and

Based on our evaluation, the herein request is found in order, hence approval is hereby recommended.

vertical corrections on the designed alignment for section 2 (following existing road).

Senior Undersecretary

Undersecretary for Regional Mindanao Operations
