Justification:

The change in station limits and the decrease in physical target for CW1 – Construction of Road Slope Protection Structures from 1,844.89 square meters to 920 square meters are due to the following:

 The decrease in the physical target was deemed necessary since station limits K0311+230 - K0311+270, K0312+005 - K0312+020, and K0304+745 - K0305+790 were removed because these sections were already mitigated by the Maintenance Section.

Station K0304+930 - K0305+003 was included to address the nearby slope that was aggravated during the onslaught of previous monsoons.

UACS No.: 310109101534000 Project ID: P00802677LZ

Page 2 of 2

- The decrease in the physical target and the increase in the unit cost were deemed necessary to incorporate reinforced concrete barriers in the road slope protection structures along the cliff side. Additionally, it is essential to reconstruct damaged 280mm thick unreinforced PCCP with a width of 3.35m and varying lengths along various stations: from K0299+454 to K0299+479 (25m long), from K0304+993 to K0305+003 (10m long), from K0305+988 to K0306+015 (27m long), from K0308+585 to K0308+603 (18m long), and a 300mm thick reinforced PCCP with width of 6.70m and is 64m long from station K0309+796 to K0309+860. Moreover, there is also a need to provide drainage structure, additional 910mm dia. RCPC, along identified damaged outlets, and to introduce curb and gutter to sections that are prone to flooding.
- The derived unit cost is based on the approved Program of Work (POW) with Detailed Unit Price Analysis (DUPA). Furthermore, the unit cost has been evaluated and reviewed by the Bureau of Construction (BOC). See attached evaluation dated May 2, 2024 from the Bureau of Construction.
- See attached Certificate of Reasonableness of Estimates approved by the Regional Director.

Attached are the following supporting documents: RSM Annexes, Approved Program of Works (POW), Detailed Engineering Design (DED), Certificate of Availability of Funds, BP202, Geotagged Photos, GIS Map, Evaluation from the Bureau of Construction, and Certificate of Reasonableness of Unit Cost.

Based on/our evaluation, the submitted request for modification of the said project is in order; oval hereof is recommended.

Cost per square meter=	P17,899,324.92	= P19,455.79 /square meter
(Except Part B)	920 square meters	

The estimated cost of P19,455.79 per square meter of slope protection structure is primarily attributed to the concreting of 268 square meters 0.28-meter thick unreinforced PCCP and 428.80 square meters 0.30-meter thick reinforced PCCP, and 25 meters length of 6-meter height retaining wall, which accounts for 97.31% of the total project cost. Since these are the major items of work for the project, it is considered reasonable as the unit costs of the items involved are within the prevailing cost range of the Department.

PROJECT NO. 2

The requested amount of **P10,916,000.00** (inclusive of EAO) for the 1,853.60 square meters Off-Carriageway Improvement: Paving of Shoulders, Baguio – Bontoc Rd – K0327+250 – K0327+700, may be considered reasonable as evaluated subject to updating of cost/price prior to bidding based on the items of work involved and its corresponding quantities as reflected in the Approved Program of Works (POW) and Detailed Engineering Design Plan, duly approved by the OIC-District Engineer, Benguet Second District Engineering Office.

	GRAND TOTAL	P	10,697,704.65	100.00%

CW-1 Off-Carriageway Improvement: Paving of Shoulders

Cost per square meter = $\frac{P5,645,656.01}{1,853.6 \text{ square meters}}$ = P3,045.78 /square meter

CW-2 Construction of Road Slope Protection Structure

Cost per square meter =
$$P4,651,353.45$$
 = P9,531.46 /square meter (Part C, F and G of CW-2) 488 square meters

The estimated cost of P3,045.78 per square meter of structure is primarily attributed to the concreting of 983.60 square meters 0.28-meter thick unreinforced PCCP and 870.00 square meters 0.30-meter thick reinforced PCCP, while the P9,531.46 per square meter of structure is majority due to provision of 42 meters 8 meter-height gabion, both of which accounts for 96.25% of the total project cost. Since these are the major items of work for the project, it is considered reasonable as the unit costs of the items involved are within the prevailing cost range of the Department.

The requested amount of **P15,000,000.00** (inclusive of EAO) for the Construction of Flood Mitigation Structure within Amburayan River: along Amburayan River Tributary, Central Kapangan Section, Sta. 8+125 – Sta. 8+193 (R.S.), Sta. 8+125 – Sta. 8+265 (L.S.), Sta. 0+000 – Sta. 070 (L.S.), Kapangan, Benguet, may be considered reasonable as evaluated subject to updating of cost/price prior to bidding based on the items of work involved and its corresponding quantities as reflected in the Approved Program of Works (POW) and Detailed Engineering Design Plan, duly approved by the OIC-District Engineer, Benguet Second District Engineering Office.

ITEM NO.	DESCRIPTION		AMOUNT (Total Cost)	PERCENT Weight (%)	
CW-1	V-1 Construction of Flood Mitigation Structure				
Part B	Other General Requirements	Р	1,396,543.64	9.50%	
Part D	Subbase and Base Course	Р	7,225,398.50	49.15%	
Part I	Flood and River Control and Drai	inage			
Part I-A	Plain Reinforced Structures	Р	1,187,305.40	8.08%	
Part I-2	Plain Reinforced Structures	Р	4,890,762.38	33.27%	
	GRAND TOTAL	P	14,700,009.92	100.00%	

Cost per lineal meter = P13,303,466.28 = P47,854.20 /lineal meter (Except Part B) 278 lineal meters

The estimated cost of P47,854.20 per lineal meter of structure is primarily attributed to the construction of 178-meter length of stone masonry with reinforced concrete armor, which accounts for 90.50% of the total project cost. Since these are the major items of work for the project, it is considered reasonable as the unit costs of the items involved are within the prevailing cost range of the Department.
